

Production of fabric is much more complex than we might think !

There are multiple steps between the harvest of the cotton fibres and the end product :

HERE ARE SOME CONTRIBUTING FACTORS ...

### 1. Different types of fibre react differently when subjected to the coloring process.

- 100 % cotton fabric will be a different color than 50% cotton/50 % polyester fabric even when they are colored at the same time/in the same vat.
- For this reason, getting an identical color as the fabric for ribs or laces can be difficult as it is not an identical fibre.

### 2. Slight variations in fabric color are unavoidable.

- Production of an order of garments may be comprised of different lots of fabric.
- Slight color variations in fabric color are possible between lots produced by the same supplier.
- Coloring techniques and pigments vary from one country to another as well as one producer to another - this can influence the tone of color on the fabric, even if the color request is identical.
- Each lot of fabric can react a trifle differently even when treated to an identical production process.
- Grey is the most difficult color to reproduce consistently, no matter if all the ingredients and processes are identical. It is normal to find different color shades for grey garments.

### 3. Lighting also influences the color tone that is observed !

- Colors may appear different depending on the lighting under which they are observed.
- Fabric approval at Attraction is always made in natural daylight.

**WE EARNESTLY SEEK OUT AND WORK WITH THE BEST PRODUCTION FACILITIES AVAILABLE IN ORDER TO OFFER THE BEST PRICE/QUALITY RATIO. HOWEVER, VARIATIONS IN COLOR ARE ACCEPTED FOLLOWING CERTAIN ESTABLISHED CRITERIA AND TOLERANCE MARKERS.**

## ALL OUR EFFORTS ARE GEERED TOWARDS AVOIDING :

DELAYS IN  
RECEPTION OF GOODS

Refusing an order and requesting a re-do can easily take 60 to 90 days.

SIZING ISSUES

Approving slight variations of tone within the same color garment enables us to complete orders with different lots.

WASTE !

Environmental considerations are an important part of our core values. Refusal of a shipment because of a minimal variance in color is unreasonable to us. Color variations are not noticeable when worn - they are only slightly apparent when shirts are together in piles/rows. On top of that, the color will invariably change tone slightly after wear and maintenance.
